

INNOVATION & DESIGN

CONTOUR II SEAT SYSTEM

Our multi-position Contour II Seat System allows you to personalize your fit for comfort and performance. **[1]** The seat and backrest are cushioned with channel-vented foam for excellent drainage and airflow, **[2]** while the five-position indexing system makes back-and-forth seat adjustments easy. This feature allows you to fine-tune the distance to the foot braces, position of your thighs for maximum control and adjust boat trim. **[3]** The backrest height and incline are also fully adjustable and the system can be further customized using the **[4]** Delta Hip Pad Fit Kit. All seat adjustments are easy to make on the fly, so you can focus on the adventures ahead of you instead of the seat beneath you.

ADVANCED THERMOFORM CONSTRUCTION

Our skilled workers carefully craft every Delta kayak using a proprietary blend of thermoplastic materials. **[1]** An ABS base layer provides superior impact-resistance and rigidity, while the **[2]** Solarkote exterior surface contributes outstanding abrasion and UV resistance for a smooth, bright finish and vibrant, lasting colours. Our kayakers have higher impact strength than composite fibreglass boats and hold their shape better than polyethylene kayakers, but the first thing you're likely to notice is their weight. Thanks to our advanced thermoform construction, Delta kayakers are not just tough and good-looking — they're also among the lightest on the market.

ABOUT DELTA KAYAKS

WHO WE ARE

At Delta, we only build thermoformed kayakers because we believe in the technology, our kayak designs, and our state-of-the-art manufacturing techniques. We're proud to craft our kayakers in coastal British Columbia and feel there's no better place to prove our designs. And we make kayakers for everyone, from beginner to expert, because we believe every paddler deserves a well-crafted kayak that suits their own style and ability. Our focus has always been to build the world's finest thermoformed kayakers right here in North America, and we think our quality kayakers speak to the value of doing one thing, and doing it well. That's who we are.

That's the Delta Difference.

COMMITMENT TO THE ENVIRONMENT

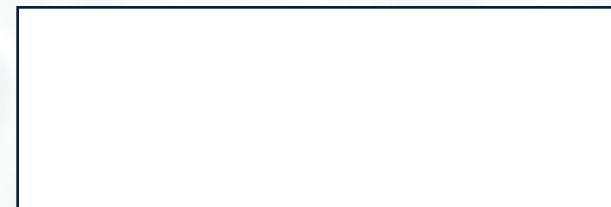

As kayakers and outdoor enthusiasts, we take environmental stewardship seriously. Every Delta Kayak is made from materials and construction methods that tread lightly on our planet. The materials we use are safe to manufacture and are completely recyclable. 100% of our scrap material is collected and repurposed so there is no waste.

ADVENTURE REC

EXCEPTIONAL STABILITY.
UNSURPASSED ENJOYMENT.

Our Adventure Rec kayakers are the perfect choice for novice paddlers, anglers or photographers looking for a lightweight kayak with ample storage options, ease of entry and great performance. They also feature the superior tracking, effortless glide and exceptional stability of our proprietary Fusion Hull Design.

LIGHT TOURING

ULTRALIGHT PERFORMANCE.
OUTSTANDING VERSATILITY.

Our Light Touring kayakers are the ideal choice for paddlers seeking performance in a smaller, lightweight design. With plenty of storage capacity for overnight or weekend trips, they offer responsive handling while maintaining excellent stability. A full complement of deck rigging and outfitting features make these models the "compact sea kayakers" of the Delta fleet.

TOURING

TOURING PERFORMANCE.
EXPEDITION CAPACITY.

These comfortable cruisers appeal to novice and advanced paddlers alike, thanks to their outstanding versatility, massive storage capacity and predictable performance. The hulls feature an extended waterline and moderate v-shape for an impressive combination of speed and stability, imparting confidence in almost any sea conditions.

PERFORMANCE TOURING

ADVANCED PERFORMANCE.
BUILT FOR ADVENTURE.

These exceptional kayakers are all about balanced performance. Whether you're eating up the miles on a long trek or playing in the surf, they do it with precision and grace. A shallow V-shaped hull, moderate rocker and finely tuned chines come together to make these outstanding boats shine.

FUSION HULL DESIGN AVAILABLE ON EACH OF OUR ADVENTURE REC MODELS

Fusion Hull combines the tracking and quiet performance of traditional kayaks with the superior stability of catamaran designs. The goal was to create an exceptionally stable kayak without sacrificing glide, and our designers achieved that objective by melding the best elements of two classic hull shapes. The pronounced V-shaped bow quietly cuts through the water and allows for more precise maneuvering, while the Hybrid Catamaran hull at the stern provides excellent stability without resorting to excessive width. Moderate rocker and a long waterline complete the package, providing good tracking and minimal fishtailing.
